PREFAB ASSEMBLIES

with "WAGO" Quick Connectors

SAVE Time & Money

Order commonly needed assemblies—
for everyday jobs and large projects.
Immediately available from stock

Allow FAST, Trouble-free Installation

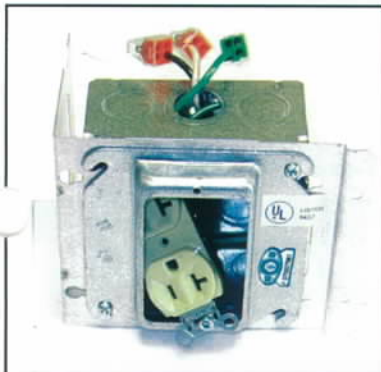

Assemblies with MC cable, ROMEX, etc. whips attached are difficult to handle and install plus whips often run short. Install "Wago" method assemblies then later connect whip conductors to WAGOs and push wires with Wagos thru open KO until whip is attached to box with a snap in connector. We strongly recommend this method rather than whips attached to box. **WAGO Quick Connectors are UL listed for solid or stranded wire.**

All assemblies include:

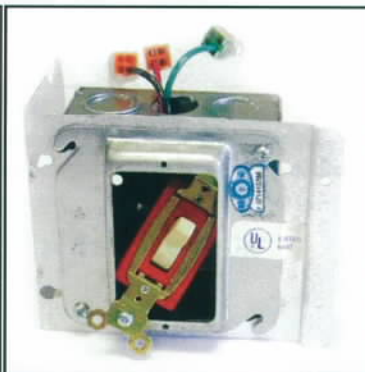

- 1 - 4 sq x 2-1/8 deep box 1/2 and 3/4" KO
- 1 - 1 gang x 5/8" raised mud ring
- 1 - **20 AMP** specification grade back wired ivory or white wired in device tucked in box.
- 1 - # 12 stranded 8" long green pigtail grounded to box
- 3 - # 12 stranded 8" leads one black, white, and green lead for receptacles and black, red and green for switches each with a Wago quick connector attached. Looped receptacles have 6 leads - 3 in and 3 out of box. 2 black, 2 white and 2 green on same circuit.
- 1 - Back box support for 2-1/2, 3-1/2 or 4 inch steel or wood stud wall depths.
- 1 - **One Gang snap on/off protective cover attached to mud ring.** (see photo)

Patented one-piece snap on/off protective cover

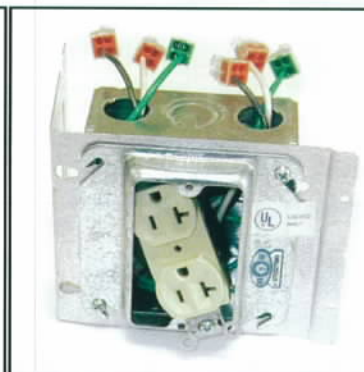

- Protects device and wire from damage
- Keeps paint, mud or debris out of the box
- Adjustable—snaps on inside edges to fit all mfgs' brands mud rings and allows routers to cut a smaller hole
- No screws to labor, drop or lose
- Strong steel. Reusable
