

Universal Conduit Support Plate

Support each box and attached conduits with only one threaded rod or beam clamp.

Eliminate the cost of supporting conduits separately with pencil rods or strut and save at least 5 minutes installation time per conduit. Use one 1/4" threaded rod or beam clamp to support box and plates to building structure. Each plate will support up to 6 conduits within 4 inches of the box, and you can cross the plates to support conduits on all four sides of the box with caddies or minnies.

This is a strong and secure support method ideal for trapeze systems, precast concrete structures, flexicor decks and steel I-beams more than five feet apart.

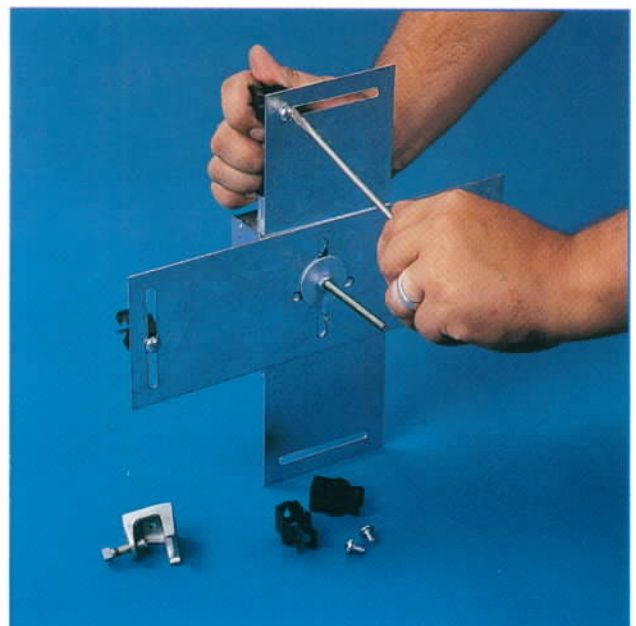

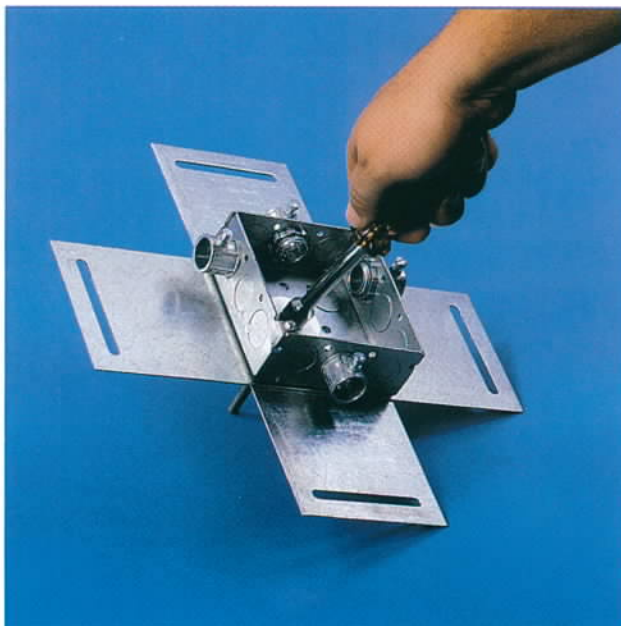

Support your conduit and boxes the safe and easy way, with our Universal Conduit and Box Support Plate.

Supports all conduits in compliance with NEC Article 348-13 and similar sections. Patented. UL Listed in U.S. and Canada.

Save at least 5 minutes per conduit!

Plates can be quickly mounted to box with the same threaded rod or beam clamp that will be used for securing the box to the structure.

Caddies and minnies can easily be mounted into position making the box ready to accept conduit...it's that simple!

Our Universal Conduit Support Plate...

- Is quick, easy to install and is extremely strong.
- Eliminates labor and material to support each conduit separately.
- Can be crossed on the box to support up to 12 conduits.
- Accommodates self-tapping screws for fastening to all standard junction boxes.
